

Documentation of data

From metadata to tools

Øystein Godøy, Markus Fiebig, Torill Hamre

Topics

- Metadata
 - Discovery level
 - Use level
- Data structure and formatting
- Provenance
- **Tools**

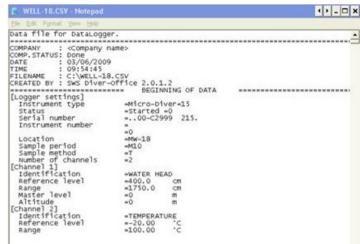

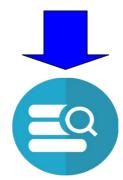

- Why tools?
 - To add documentation to dataset files
 - Discovery metadata
 - Usage metadata
 - To prepare datasets in standard formats
 - Makes data easier to reuse (also by others)
- What tools?
 - GIS (commercial, free)
 - Data processing and analysis tools (commercial, free)
 - Rosetta (free)

Rosetta

- Open source tool, written in Java
 - https://github.com/Unidata/rosetta
- Developed by UniData
- Web-based application
- Converts ASCII files to NetCDF
- Can read metadata from header(s)
- Can add user defined metadata
- Saves "setup" as templates for future

Rosetta

Rosetta is Beta software under active development, use at your own risk. This specific version of Rosetta has been tailored for NMDC.

Welcome to Rosetta, a data transformation tool. Rosetta is a web-based service that provides an easy, wizard-based interface for data collectors to transform their datalogger generated ASCII output into Climate and Forecast (CF) compliant netCDF files. These files will contain the metadata describing what data is contained in the file, the instruments used to collect the data, and other critical information that otherwise may be lost in one of many dreaded README files.

In addition, with the understanding that the observational community does appreciate the ease of use of ASCII files, methods for transforming the netCDF back into a user defined CSV or spreadsheet formats is planned to be incorporated into Rosetta.

Rosetta is currently under continued further development, and ready for beta testing.

What would you like to do?

Convert a file to the netCDF format and create a new template

Upload, modify, and use an existing template

Version: 0.5.1-NERSC

Build Date: Fri Aug 03 11:25:13 CEST 2018

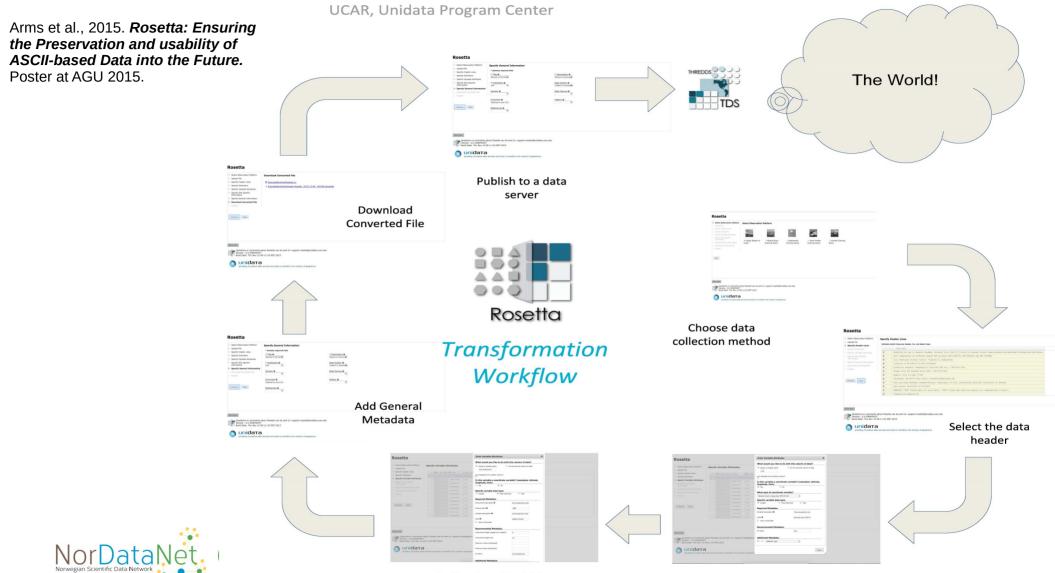

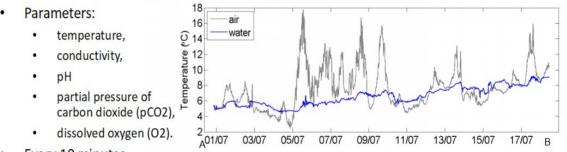

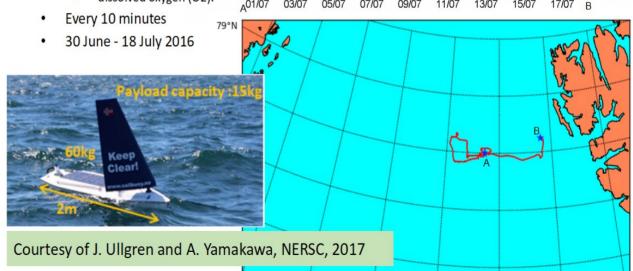

Define Data Variables and Metadata Define Coordinate Variables and Metadata

Ocean Acidification data in 2016 in the Fram Strait (RFF Iskantseilas)

Collected by a remotely controlled sailbuoy

- Example
 - Sailbuoy data 2016
 - Converted from ASCII to NetCDF with Rosetta
 - Published in NMDC through Thredds Data Server (TDS)
 - Searchable through NMDC
 Data Portal at https://nmdc.no/

- What should motivate a tool developer?
 - To serve the needs of the users!
 - Be like a good football referee (i.e. "invisible")
 - Because, how much fun really is format conversion?
 - Luckily we can use tools like Rosetta
 - Most of us would rather do something else...
